

RESEARCH

Clinical Research and Education to Address Calgary's Disparity

Changing Preeclampsia Screening Protocols in Early Gestation (via Cara HELLPS)

A pilot research study has now led to new screening protocols for new moms that is allowing for the early detection of risk factors for preeclampsia.

Early indicators and prevention of Hypoxic-Ischemic Encephalopathy

An Alberta-wide study to identify early indicators of too little oxygen or blood flow being received by the brain over a period of time, with the long-term goal of a 50% reduction in cases.

Foothills Medical Centre NICU Simulation Lab for Advanced Training and Education

Simulation allows care providers to learn new skills and fine-tune delicate procedures in a safe environment.

COVID vaccine tracking and health outcomes of pregnant mothers and infants

Provide Albertans of reproductive age, pregnant or breastfeeding and their families with vaccine safety and effectiveness data to make healthy choices.

P3 Cohort for Preterm Birth

A collaborative study with the U of C to predict which women will deliver preterm and provide opportunities to prevent preterm birth.

Thank you!
